grta.ai

WEBSITE OVERHAUL · PLAN V1

People move work forward.

The plan for GRTA.AI's new brand, sitemap, website and backend. From a single landing page to a living proof of Collective Intelligence.

DATE	STACK	LANGUAGES
20 October 2026	Next.js · Supabase · Claude API	English first, Danish ready

CONTENTS

01 Context: what GRTA is now

02 Principles & working rules

03 Phase 0: Plan document

04 Phase 1: Brand assets

05 Phase 2: Sitemap & content

06 Phase 3: Website foundation

07 Phase 4: Signature features

08 Phase 5: Backend

09 Phases 6–7: Build & launch

10 Review protocol, costs, inputs needed

01 Context

The current site is a single dark landing page that says “assemble expert teams in hours.” GRTA has grown into far more than that, and the site needs to show it.

What GRTA is today

Philosophy

AI + BI + CI = DI. Artificial, Business and Collective Intelligence add up to Decision Intelligence. “Be GRTA Together.” People come before technology.

Product

A decision acceleration engine for team builders: understand real competencies, find complementary people, assemble the right team around a problem, and learn from every outcome.

Method: HIIT Engine 9 → 3 → 1

Problem → 9 complementary competencies → 3 parallel HIIT meetings with 20×20 presentations → 1 execution plan. From emergency to execution plan in 3 hours.

Adoption

Organisation Cookbook (10 steps), Profile Recipe (the signals AI needs about a person) and the 7×7 Network (one guide helps six, and that guide sits in another group of seven).

The product roadmap the site must tell

SPRINT	CAPABILITY	WHAT IT MEANS FOR A TEAM BUILDER
1	**Zero blank page** + availability	Write a messy paragraph, get a structured brief. Busy people are excluded or clearly flagged.
2	**Gap detection** + coverage map	The AI spots missing expertise before matching. A colour-coded map shows team strength at a glance.
3	**Plain-language skill translation**	“I turn complexity into clarity” becomes matchable competencies, backed by past work. The linchpin.

SPRINT	CAPABILITY	WHAT IT MEANS FOR A TEAM BUILDER
4	**Explainable matching**, team variants, wildcards	Execution, Challenger or Innovation teams, plus an unexpected candidate with evidence for why.
5	**Data flywheel**	A two-minute outcome pulse after each project improves every future match.
6	**Proactive scout**	Skills surplus, skills gap alerts against strategy, and cross-silo opportunity spotting.

> **The moat is the data, not the algorithm.** Competitors can copy an interface. They cannot copy years of an organisation's outcome history. The site should make that clear.

Who the site is for

HR & People teams
Want to find, activate and keep hidden competencies inside the organisation.

Project & team builders
Need the right people around a specific problem, fast, without politics or guesswork.

Universities & partners
DTU Skylab as a development partner, universities in Uganda, DTU Science Park.

02 Principles & working rules

People before technology
AI is part of the solution but never dominates the visual story. People and relationships lead.

Clear entry points
HR and project teams each find their own challenges and use cases within seconds. Partners get their own track.

Nordic simplicity
Generous white space, short messages, a limited palette, and a calm, trustworthy experience.

How we work, so little needs redoing

- **Approval gates.** Brand, then sitemap and copy, are approved before any page is built.
- **Design system first.** Pages are composed only from approved components, so a change happens in one place.
- **Single sources of truth.** Colours and type live in `brand/tokens.json`; all copy lives in `messages/en.json`.
- **Drop-in illustrations.** Every illustration slot has a fixed ratio and filename, so final art replaces placeholders without layout changes.
- **Self-review after every edit.** Typecheck, lint, screenshots on desktop and mobile, copy check. Fix before moving on.

Timeline at a glance

P0	P1	P2	P3	P4	P5	P6	P7
Plan document	Brand assets · gate	Sitemap & copy · gate	Foundation & design system	Signature features	Backend	Pages	SEO & launch

Phases 4 and 5 run together in practice: each Lab feature is built with its backend slice.

03 Phase 0: Plan document

- This document, written as HTML (`docs/plan/grta-overhaul-plan.html`) and rendered to PDF with the Puppeteer setup already in the repo (`tools/render_pdf.js`).
- The current site is tagged `v1-static` in git, so it can always be restored.

04 Phase 1: Brand assets

APPROVAL GATE

“Nordic Futurism.” Warm people, luminous threads. The old navy and orange style is retired; only the GR/TA block mark carries over.

> **Concept.** People and relationships stay at the centre: warm, tactile, calm. Futurism appears only as *connection*: thin luminous threads, constellation nodes and soft holographic overlays linking people. These are how we draw Collective Intelligence. AI never takes the foreground.
>
> **Attributes:** Human · Connected · Calm · Clear · Quietly ahead.

Logo system: the GR/TA block mark, redrawn

- A vector redraw of the 2×2 stacked “GR / TA” block: geometric slab letters on an even grid, with corners tuned for small sizes.
- Variants: primary (Ember letters on Ink), reversed (Ink on Birch), mono Forest, mono white, and a horizontal lockup (mark + “grta.ai”).
- **Living mark:** a motion version where a luminous thread traces between the four letters, used for the loader and hero intro. Static everywhere else.
- Deliverables: SVG masters, PNG exports from 16 to 1024 px, favicon, Apple touch icon, default social image, clear-space and minimum-size rules.

Colour palette

Birch
#F6F1E8
Page background, warm paper

Snow
#FFFDF9
Cards and raised surfaces

Ink
#15201B
Primary text, logo block

Forest
#1F3D33
Primary brand, buttons, dark sections

Moss
#6F8C6A
Secondary, icons, tags

Ember
#E8551E
Logo letters, rare accent (max 5%)

Fjord
#9DBCCB
Luminous threads, data viz

Clay
#D8B79B
Illustration warmth, highlights

Stone
#5E5E57
Secondary text (AA on Birch)

A dark mode, **“Nordic night”** (Ink background, Fjord threads), is defined in the tokens from day one. Every text and background pair is checked against WCAG AA by script.

Typography (free Google Fonts)

Aa	**Schibsted Grotesk**, display. Made for a Norwegian newspaper group: Nordic, editorial, confident. H1 to H3.
Aa	**Inter**, body. Familiar and highly legible for longer text.
0.92	**Geist Mono**, data and labels. Scores, coverage values, small uppercase labels. The quiet “machine” voice, used sparingly.

Illustration system: “Polished clay”

- **Style:** soft 3D characters with matte materials in Scandinavian interiors (birch wood, linen, plants, daylight). Calm, mature expressions, never cartoon grins.
- **Futurist layer:** fine fjord-blue light threads connecting people; small holographic coverage maps floating above tables.
- **Recurring cast:** six named characters across ages, backgrounds and roles: HR lead, project lead, data scientist, operations analyst (“the wildcard”), student, and a 7×7 guide. They appear throughout, so the site reads as one story.
- **Illustration bible** (`brand/illustration-bible.md`): style rules, master prompt, about 14 scene prompts mapped to the sitemap, lighting and palette locks, do and don't examples.

> **Limitation.** Raster illustrations can't be generated in this environment. They are produced from the bible (Midjourney, Adobe Firefly or a designer). Until then, slots show on-brand SVG placeholders: silhouettes joined by threads. Swapping in final art changes no layout.

Other brand assets

- **Icon set:** about 30 line icons (1.5 px stroke, rounded) for the 9 competencies, the roadmap capabilities and the UI. SVG sprite and React components.
- **Motifs:** thread and constellation pattern; coverage-map language (strong, adequate, gap as Moss, Fjord, Ember dots); the 20×20 slide-stack.
- **Voice and tone guide:** plain language, short sentences, no em dashes. Claim: “People move work forward.”
- **Brand guidelines** page and PDF, plus `brand/tokens.json` as the single source for the site.

05 Phase 2: Sitemap & content

APPROVAL GATE

Six public pages. Everything else lives as a section, a tab or a modal, so the site stays small and every page earns its place.

```
/               Home: “People move work forward”
                  · Pick your door: HR / Project teams switch
                  · live Zero Blank Page demo · contact section
/how-it-works   One page, three chapters
                  · The journey: brief → translate → match → pulse → scout
                  · The method: HIIT Engine 9 → 3 → 1
                  · Rolling it out: Cookbook, Profile Recipe, 7×7 Network
/lab            All demos on one page, as tabs
                  #brief  #translate  #team  #hiit  #network
/partners       Universities & research + Challenge Exchange
/about          AI + BI + CI = DI, founders, Trust & GDPR
/legal          Privacy and terms, two anchored sections
/admin          Private: leads, moderation, demo analytics
```

What was merged, and where it went

BEFORE	NOW
/for-hr, /for-project-teams	**Home** “Pick your door” switch: one click swaps the copy, examples and demo prompt for HR or project teams. Two entry points, zero extra pages.
/method, /adopt, /adopt/7×7-network	**How it works**, chapters 2 and 3, with a sticky chapter index.
Five /lab/* pages	**Lab** tabs with shareable anchors, e.g. `/lab#translate`.
/partners/challenges	A section on **Partners**.
/trust	A section on **About**, plus a trust row on Home.
/book-a-demo	A **modal** opened from any page, plus the contact section on Home.
/privacy, /terms	One **Legal** page.

Navigation: How it works · Lab · Partners · About. Buttons: *Book a demo* (opens the modal) and *Log in* (a waitlist until the product login exists).

Page blueprints

Each page gets a content file (`docs/content/<page>.md`) with section order, copy, illustration slot and calls to action. The home page, for example:

#	SECTION	PURPOSE
1	**Hero**	“People move work forward.” Two calls to action; the cast around a table, joined by threads.
2	**Four value tiles**	Connect the right people · Better collaboration · From insight to action · Built for people and AI.
3	**Pick your door**	HR / Project teams switch. Swaps the challenges, use cases and demo prompt below it.
4	**Live mini-demo**	Zero Blank Page, preloaded with an example for the chosen door.
5	**9 → 3 → 1 band**	The HIIT Engine in one visual line.
6	**How it learns**	The data flywheel, in plain language.
7	**Partners strip**	DTU Skylab and others, once approved for public use.
8	**Trust row**	GDPR, your data stays yours, explainable AI.
9	**Contact**	Short demo / partner request form; the same form powers the modal.

06 Phase 3: Website foundation

Stack

- **Next.js**, latest stable (App Router, TypeScript), **Tailwind CSS v4** fed by the brand tokens, **next-intl** (`/en` live, `/da` scaffolded), **Motion** for animation (respects reduced motion), **MDX** for resources.
- **Hosting:** Vercel Hobby (free) while building, then Vercel Pro or Cloudflare Pages at commercial launch. **Supabase Free** while building, Pro only at public launch.

Repository layout

```
app/[locale]/(marketing)/...   pages
app/api/...                    AI and form endpoints
app/admin/...                  protected admin
components/ui/                 Button, Card, Tag, Section, Nav, Footer, Form
components/brand/              Logo, LivingMark, Thread, CoverageMap, ...
components/lab/                one component per demo tab
lib/ai/  lib/supabase/         Claude client, prompts, schemas; database helpers
content/  messages/            MDX resources; en.json, da.json
supabase/migrations/           database schema
brand/  tools/  legacy/        brand assets; review tools; the old site
```

Design system first

A `/styleguide` route shows every component before any page exists. Pages are then assembled only from approved parts.

07 Phase 4: Signature features

The site doesn't just describe GRTA; it lets visitors *use* slices of it. Each feature shows one capability of the real product.

> **Nordlys Group.** All demos run against a fictional organisation of about 80 synthetic people, with profiles, past projects, availability and outcome history. No real personal data is needed, which keeps every demo GDPR-safe.

1. **Zero Blank Page** `/lab#brief · also on Home`

   Type a messy paragraph about a problem. Watch it turn into a structured brief (roles, competencies, timeline) in real time. Then GRTA taps you on the shoulder: "Projects like this usually need change management. You asked for none."

   `WHY NEW` The AI critiques your thinking, not just your formatting.

2. **Buzzword Translator** `/lab#translate`

   Paste your own corporate self-description ("I turn complexity into clarity"). Get matchable competencies, each with the reasoning, plus a shareable "Translated" card for LinkedIn.

   `WHY NEW` Turns the product's linchpin into something people want to share.

3. **Team Variants & the Wildcard** `/lab#team`

   Pick a brief, then flip between Execution, Challenger and Innovation teams from Nordlys. A live coverage map shows strengths and gaps. A Wildcard card argues "I know this looks odd, but hear me out" with evidence. Unavailable people appear greyed out, with the reason.

   `WHY NEW` Explainable matching you can feel: choices, not a black box.

4. **9 → 3 → 1 Simulator** `/lab#hiit`

   Enter a problem. GRTA picks 9 competency lenses, splits them into 3 parallel rooms (an animated constellation), each room returns a short perspective, and they converge into 1 draft execution plan with owners, deadlines and KPIs. Downloadable as a PDF.

   `WHY NEW` The HIIT Engine, compressed into sixty seconds.

5. **7×7 Network Grower** `/lab#network`

   Enter your organisation's size. A constellation grows from one guide to the whole organisation, showing how many guides and layers you need and how long rollout takes.

   `WHY NEW` Makes the human adoption model tangible for HR buyers.

6. **Living Constellation** `Home hero background`

   Each anonymised, moderated problem from the Lab adds a glowing node to a shared constellation, linked by the competencies it needed. Visitors see what others are working on.

   `WHY NEW` Collective Intelligence as a live, shared artwork.

7 **Challenge Exchange** `/partners · section`

Universities and partners (DTU, Uganda) post a challenge. GRTA tags the competencies and disciplines needed and surfaces complementary challenges and partners across borders. Partners sign in by magic link.

`WHY NEW` A first live slice of the cross-silo scout, built for the DTU conversation.

8 **Two-Minute Pulse** `end of every demo`

Five questions about the demo itself, with a visible timer that stays under two minutes.

`WHY NEW` Demonstrates the data flywheel while collecting real feedback.

Launch order: 1, 3, 2, 4 at launch; 5, 6, 7, 8 shortly after. Every feature has a static fallback when the AI is unavailable or rate-limited.

08 Phase 5: Backend

Supabase (Postgres, auth, storage, pgvector) with Next.js route handlers and the Claude API.

Data model

TABLE	HOLDS
`leads`	Demo and partner requests (HR, project, partner, investor), consent flag, source page.
`synthetic_people · synthetic_projects · availability · outcomes`	The Nordlys Group dataset, seeded from a JSON file.
`competencies`	Taxonomy based on the 9 HIIT competencies and sub-competencies, with vector embeddings.
`lab_sessions`	Anonymised demo inputs and outputs (opt-in), for the constellation and analytics.
`constellation_nodes`	Moderated public nodes: pending, approved or hidden.
`challenges · partner_orgs · challenge_matches`	The Challenge Exchange.
`pulses · rate_limits`	Two-minute ratings; per-visitor usage counters.

Row-level security on every table: the public can only insert where intended; private tables are readable by admins only.

AI layer

- **Claude Sonnet 5.5** for briefs, translation, team rationale and HIIT synthesis; **Claude Haiku 5.5** for tagging, moderation and cheap classification.

- Every AI output follows a strict schema, so the interface never guesses at free text. Responses stream so demos feel alive.
- **Matching is deterministic:** vector similarity on competencies, an availability filter, and a diversity term for Challenger and Innovation teams. The AI only *explains* the result. That keeps it consistent and cheap.
- **Cost and abuse protection:** Cloudflare Turnstile, per-visitor rate limits, input length caps, a daily spend cap, and prompt caching.

Supporting services

- **Email:** Resend (free tier) for lead notifications; partner magic links via Supabase Auth.
- **Lead continuity:** new leads also sync to the existing Google Sheet, so the current workflow keeps working.
- **Analytics:** cookie-free (Vercel Analytics or Umami), so no cookie banner.
- **Admin (`/admin`):** magic-link login for allow-listed emails; leads, moderation queues, demo usage and AI spend.

09 Phases 6–7: Build & launch

Phase 6: Pages

Six pages, in this order: Home → How it works → Lab → Partners → About → Legal, plus the Book a demo modal. Every page uses only styleguide components and copy from the message files.

Phase 7: SEO, performance, launch

- Per-page metadata and branded social images, sitemap.xml, robots, structured data, hreflang ready for Danish.
- Targets: Lighthouse 95+ in all categories, LCP under 2 seconds, CLS under 0.05, WCAG 2.2 AA.
- Point the domain at the new deployment.

10 Review protocol, costs, inputs

Self-review after every edit

1. Typecheck and lint must pass.
2. Screenshots of every changed route at 1440 px and 390 px, light and dark, checked for contrast, spacing, overflow, clipping and leftover placeholders.
3. Copy check: plain language, no em dashes, matches the voice guide.
4. Fix, re-screenshot, and only then move on.

Running costs

SERVICE	WHILE BUILDING	AT PUBLIC LAUNCH
Supabase	Free: 500 MB database, 50k monthly users, 1 GB storage. Pauses after 7 idle days.	Pro, $25 / month
Hosting	Vercel Hobby, free (non-commercial use)	Vercel Pro $20 / month, or Cloudflare Pages free
Claude API	Pay per use, small during development	Capped by rate limits and a daily spend limit
Resend, Turnstile, analytics	Free tiers	Free tiers at expected volume

What's needed from you along the way

- Claude API key; Supabase and Vercel accounts; Resend and Turnstile keys.
- High-resolution originals of the GR/TA mark, if they exist.
- Founder names and photos for the About page.
- Permission before naming DTU Skylab or any partner publicly.
- Final illustrations, generated from the illustration bible.

> **Next step:** Phase 1, brand assets. Nothing is built on top of the brand until you approve it.
